

THE VOICE OF EUROPE'S INDEPENDENT FUEL SUPPLIERS

Reflecting on the Sustainable and Smart Mobility Strategy: how to fuel the transition?

13 January 2021 | 14:00 - 15:15 | Online

The Sustainable and Smart Mobility Strategy, announced as part of the European Green Deal and just released on 9 December 2020, defines a series of flagship actions and milestones for the European transport sector's transition towards achieving the EU's objectives of a sustainable, smart and resilient mobility.

The Strategy, acknowledging that the most serious challenge facing the transport sector is to significantly reduce its emissions and become more sustainable, is dedicated to outlining a combination of policy measures that can deliver at least a 90% reduction of GHG emissions by 2050.

UPEI invites you to its online event to reflect on the Sustainable and Smart Mobility Strategy and discuss how to translate this vision into legislation.

Panellists and participants will focus on:

- sustainable mobility and reaching climate objectives
- the contribution of different transport modes with an emphasis on road transport
- challenges and opportunities for fuels
